

GetLinked macro system

The GetLinked macro system allows you to record and playback macros throughout the application. Recorded macros can also be executed from the command line by specifying the macro file name as the last parameter. The following command line will launch GetLinked and immediately playback the macro "POSLink.mac".

```
C:\GetLinked\GetLinked.exe GetLinked.set POSLink.mac
```

Below is a sample macro that runs POSLink import and transfer for all available locations, exports the reports to a log file, and then exits GetLinked.

```
# DEXVERSION=14.00.0084.000
Logging file 'c:\GetLinked\POSLink_Macro.log'
MacroError limit 1000
